Army Career Degree Plan for MOS 25R Visual Information Equipment Operator/Maintainer

Are you interested in advancing your career as a Soldier in MOS 25R by pursuing a college degree? Are you looking for a degree that is directly related to your military training and maximizes the amount of college credit for your military training and MOS experience? If so, carefully consider a distance-learning degree that has been recently added to the Army Career Degree Program (ACDP): Thomas Edison State College (New Jersey) Associate in Applied Science in Applied Electronics Studies Major: Electronics Systems. Credit from this degree program will transfer to Thomas Edison State College's Bachelor of Science in Applied Science and Technology - Electronics Engineering Technology degree program. Thomas Edison State College will award fifty percent of the total degree requirements for an AAS to Soldiers working in 25R MOS.

The ACDP is a specialized Army education initiative in SOCAD, the Servicemembers Opportunity Colleges (SOC) degree program system for the Army. ACDP provides Soldiers college degree options from civilian colleges that are directly related to their occupational specialties. The ACDP allows Soldiers to maximize the learning achieved throughout their own Army career development and complete college degrees through distance learning anywhere in the world.

You can review the 25R ACDP plan online at http://www.soc.aascu.org/socad/25R.html. The site also provides information about other MOS-related ACDP plans. ACDP plans are also linked to the GoArmyEd.com portal (http://www.GoArmyEd.com), which--along with a visit to your local Army Education Center--should be your first step in deciding whether these ACDP plans are right for you.

This announcement is a cooperative marketing effort among Headquarters, Army Continuing Education System, Communications and Information Systems Operation, Training and Doctrine Command, and SOCAD. For more information about the SOCAD ACDP, send an email to socad@aascu.org or call 1-800-368-5622.
